Installation

In order to build your app on a SmartDeviceLink (SDL) Core, the SDL software development kit (SDK) must be installed in your app. The following steps will guide you through adding the SDL SDK to your workspace and configuring the environment.

**NOTE**

The SDL SDK is currently supported on Android 2.2 (Froyo) and above.

Install SDL SDK

Each SDL Android library release is published to JCenter. By adding a few lines in their app’s `build.gradle` file, developers can compile with the latest SDL Android release.

To gain access to the JCenter repository, make sure your app’s `build.gradle` file includes the following:
