

JavaScript Suite Guides

Document current as of 07/09/2020 03:07 PM.

Installation

In order to build your app on a SmartDeviceLink (SDL) Core, the SDL software development kit (SDK) must be installed in your app. The following steps will guide you through adding the SDL SDK to your workspace and configuring the environment.

NOTE

The SDL SDK is currently supported on Node 9.11.2 and above.

Install SDL SDK

You can find the most recent release of the SDL JavaScript Suite [here](#). The project comes with prebuilt bundles of the library in the form of `SDL.min.js` files. There is a vanilla JavaScript distribution of the library as well as one for Node.js. They are located in the `lib/js/dist` and `lib/node/dist` directories respectively.
